

Excel Sales Data Analysis

Project Overview

This project showcases data analysis performed using **Microsoft Excel**. The goal was to analyze sales data, uncover customer purchasing patterns, and generate meaningful business insights through Excel's analytical features.

Objectives

- Analyze sales performance.
- Study customer purchasing behavior.
- Compare sales across different years.
- Analyze purchase modes.
- Present data in a structured and easy-to-understand format.

Dataset

The dataset contains sales transaction records, including customer details, purchase modes, sales amounts, and other related information.

Analysis Performed

- **Year-wise Sales Analysis**
 - Compared sales across different years.
 - Identified sales trends.
- **Purchase Mode Analysis**
 - Analyzed the distribution of different payment methods.
 - Identified the most frequently used purchase mode.
- **Customer Analysis**
 - Evaluated customer purchasing patterns.
 - Summarized customer-wise sales using Pivot Tables.

Excel Features Used

- Pivot Tables
- Pivot Charts
- COUNTIF

- SUMIF
- MAXIFS
- Sorting & Filtering
- Conditional Formatting
- Charts
- Basic Data Cleaning

Business Insights

- Compared yearly sales performance.
- Identified customer purchasing trends.
- Analyzed preferred purchase modes.
- Converted raw sales data into meaningful summaries using Pivot Tables.

Skills Demonstrated

- Data Cleaning
- Data Analysis
- Pivot Table Analysis
- Business Reporting
- Data Visualization
- Excel Functions
- Analytical Thinking

Tools Used

- Microsoft Excel

Project Files

- Sales Data Analysis Workbook (.xlsx)
- README.md

Conclusion

This project demonstrates my ability to clean, analyze, summarize, and visualize business data using Microsoft Excel. It highlights practical Excel skills commonly used in data analysis, including Pivot Tables, formulas, and chart-based reporting.

Author

Created as part of my **Data Analyst Portfolio** to demonstrate practical Excel data analysis skills.
